

Document discovery quality and cost

This report summarizes **21 completed discovery runs** over Anvil and Stampede3. Each available model-site pair has three repetitions. Gemini Pro currently has Stampede3 results only, so its aggregate is not a cross-site comparison.

Table 2: Document discovery breadth and compliance

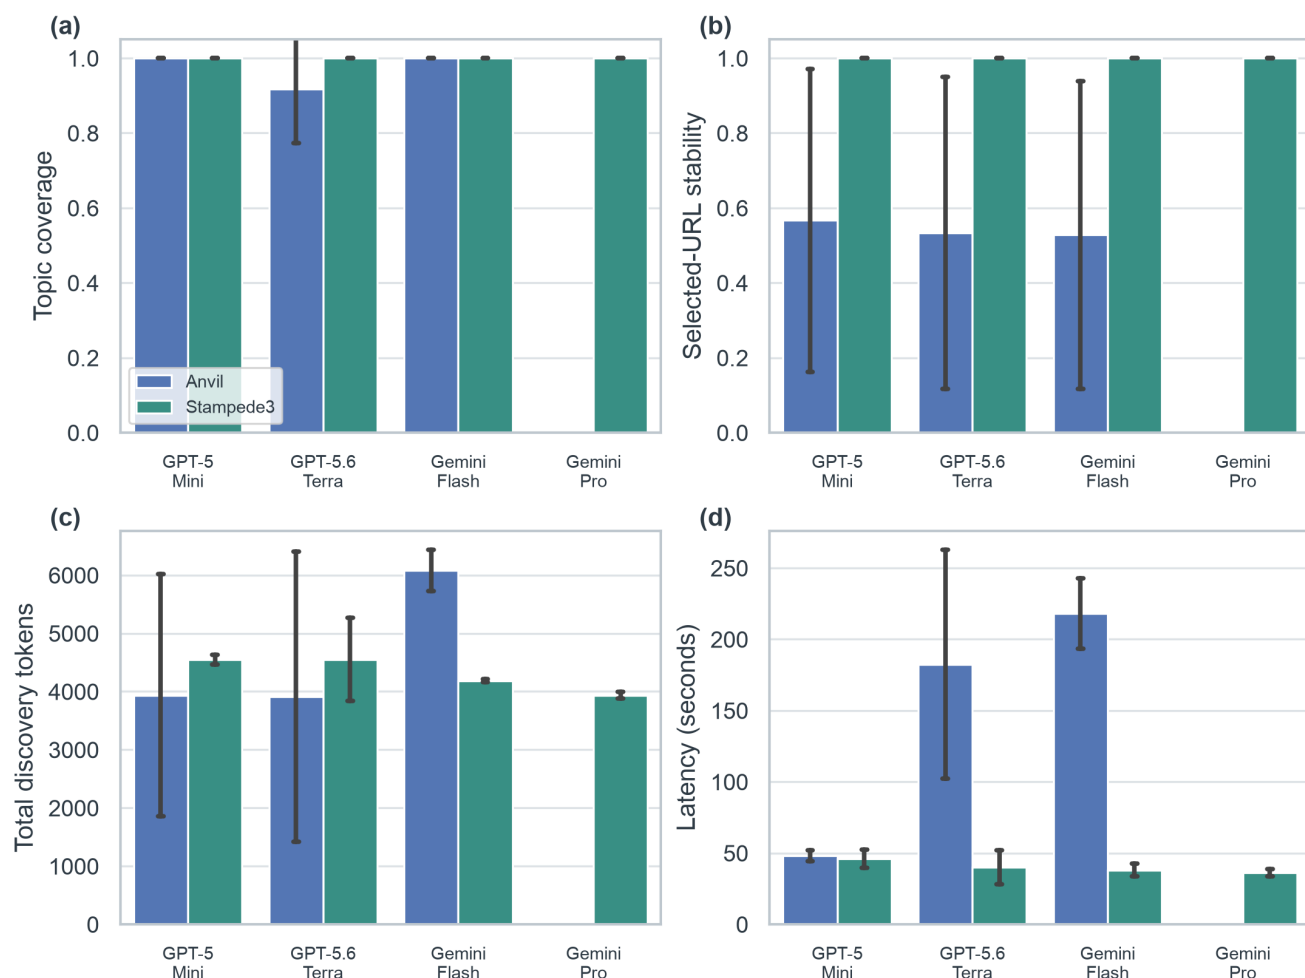

Site	Full topic coverage	Official in-scope pages	Scope violations	Fetch yield	URL stability	Tokens/run	Latency/run (s)
Anvil	8/9 (88.9%)	24/24 (100.0%)	0	63/105 (60.0%)	0.543	4643 ± 1956	149.6 ± 88.2
Stampede3	12/12 (100.0%)	12/12 (100.0%)	0	122/123 (99.2%)	1.000	4303 ± 411	40.0 ± 7.3

Full topic coverage means the selected corpus covers submission, resources, storage, and networking. Official in-scope pages are selected pages whose host matches the site's allowlisted documentation domain and whose deterministic scope classifier labels them `target_site`. URL stability is mean selected-URL Jaccard similarity to repetition one within each model-site group. Costs are reported as mean ± one standard deviation per discovery run.

Per-model summary

Model	Runs	Sites	Mean coverage	Minimum coverage	URL stability	Selected pages	Mean tokens	Mean latency (s)
gpt-5-mini	6	2	1.000	1.000	0.783	1.8	4239.2	47.1
gpt-5.6-terra	6	2	0.958	0.750	0.767	2.0	4231.7	111.2
gemini-3.6-flash	6	2	1.000	1.000	0.764	1.7	5132.5	128.0
gemini-3.1-pro-preview	3	1	1.000	1.000	1.000	1.0	3933.7	36.2

Quality and cost

Vector PDF figure

Panel (a) reports coverage of the four tracked discovery topics: submission, resources, storage, and networking. Panel (b) reports selected-page stability as URL Jaccard similarity to repetition one. Panels (c) and (d) report total discovery tokens and wall-clock latency. Error bars show one standard deviation over the available repetitions.

Site-level values

Site	Model	Runs	Coverage	URL stability	Tokens	Latency (s)
Anvil	gpt-5-mini	3	1.000	0.567	3935.3	48.2
Anvil	gpt-5.6-terra	3	0.917	0.533	3912.3	182.5
Anvil	gemini-3.6-flash	3	1.000	0.528	6081.0	218.0
Stampede3	gpt-5-mini	3	1.000	1.000	4543.0	46.0
Stampede3	gpt-5.6-terra	3	1.000	1.000	4551.0	40.0
Stampede3	gemini-3.6-flash	3	1.000	1.000	4184.0	38.0
Stampede3	gemini-3.1-pro-preview	3	1.000	1.000	3933.7	36.2

Interpretation boundary

Topic coverage and URL stability are useful automated proxies, but they do not establish that a selected page is authoritative or that it contains every needed policy field. Those claims require a manual page-relevance audit or downstream field extraction accuracy. Latency also includes web search and fetch time, so it is not purely model inference time.
